

The IEO report „Photovoltaics market in Poland 2023" shows that the year 2022 was very good for the photovoltaic sector in Poland, better even than the record year of 2021. In 2022, photovoltaics was yet again the leader and the main driving power for the increase in RES market in Poland.

Poland's installed solar capacity surged to over 17 GW in 2023, making it the fourth-largest solar market in the European Union with over 1.3 million micro solar installations contributing to the energy mix.

We have many years of experience in the field of solar module distribution in Poland and Europe. In our offer, you will find photovoltaic modules, solar inverters, optimisers and energy storage from renowned global manufacturers, as well as electrical equipment, a full range of AC and DC protection and ready-made electrical switchgear, and ...

Solar energy in Poland includes the production of solar thermal energy and solar photovoltaics. By the end of 2021, there were around 3,000,000 square metres (32,000,000 sq ft) of installed solar thermal collectors which in Poland are primarily used for heating up household water.

Out of 41.4 GW of total photovoltaic capacity installed in 2022 almost 5 GW was installed in Poland. This demonstrates the unwavering growth of investment in solar energy in Poland. Only Germany and Spain report a faster photovoltaic industry growth rate.

Poland has favorable conditions for solar energy generation, with a good amount of sunlight throughout the year. The government has introduced several measures to promote the development of the solar industry, including feed-in tariffs, net metering, and renewable energy auctions.

Out of 41.4 GW of total photovoltaic capacity installed in 2022 almost 5 GW was installed in Poland. This demonstrates the unwavering growth of investment in solar energy in Poland. Only Germany and Spain report a faster photovoltaic ...

Lately, Poland has demonstrated significant growth in its solar energy capacity, owing to a growing adoption of the technology and corporate demand, helped by favourable policy regimes. As a result, in 2022, Poland emerged as Europe's third-biggest solar market.

Poland emerged as Europe's third-biggest solar market in 2022, driven by the rapid uptake of PV micro-installations below 50 kW in size, but this year is already starting to look different.

By the end of December 2023, Poland's cumulative installed solar PV capacity reached 17,057MW, the highest among all renewables. Solar was followed by wind (9,428MW) and hydro (979MW).
